DIRECTIONS FOR USE

It is a violation of Federal Law to use this product in a manner inconsistent with its labeling.

Hi-Yield® Root Killer is formulated to quickly and economically kill and dissolve roots from Trees and Shrubs that have entered the sewer line. When used every 3 to 4 months, Hi-Yield® Root Killer will prevent root stoppage and fungus growth. It kills the roots that have entered the pipe lines without harm to Trees and Shrubs outside the sewer. It will not corrode sewer or drain pipes leading into or out of septic tanks, and it will not harm necessary bacterial action in septic tanks or cesspools. By keeping pipes clear of roots and fungi, Hi-Yield® Root Killer will prevent the formation of odorous gases. The ideal time to apply this product is before retiring at night, when the use of utilities is low. To apply, pour 1/3 of the crystals into a toilet bowl. Immediately flush the toilet repeatedly until all the crystals have been flushed down. Repeat this procedure until the entire contents have been flushed down. As a preventive against stoppage, make the above application every 3 to 4 months.

For complete stoppage, use 4 to 6 lbs. and repeat in 7 to 10 days. If serious or complete blockage occurs, rodding may be necessary to assure some flow before treatment. This product may also be used through a distribution box direct to septic tank drainfield. Add sufficient water by hose or pail to carry crystals to point of root penetration or blockage. Do not apply this product through tub or sink drains.

STORAGE AND DISPOSAL

PESTICIDE STORAGE: Store in original container. Keep in an area inaccessible to children and pets.

PESTICIDE DISPOSAL: **If empty:** Do not reuse this container. Place in trash or offer for recycling if available. **If partly filled:** Call your local solid waste agency for disposal instructions. Never place unused product down any indoor or outdoor drain.
